

Winter Storage Information **for E-Z-GO RXV Electric Golf Cars**

Please note the instructions for winter storage on E-Z-GO RXV electric golf cars.

1. Check and fill batteries with water as needed.
2. Make sure all battery cable connections are clean.
3. Charge fully and **UNPLUG** charger.
4. Turn Key switch to “**OFF**” position and **REMOVE** key.
5. Disconnect any 12-volt accessories with a memory; such as a radio with clock, etc.
6. **Leave regenerative switch on Run. DO NOT switch to Tow/Maintenance. The ONLY time the switch should be in Tow/Maintenance is when towing. Leaving the switch in “Tow/Maintenance” on the RXV golf car will drain the batteries.**
7. Try to **charge batteries every 30 days**; if not possible, make sure to disconnect a battery cable.

Please call if you have any questions.
